

Is your child MYOPIC?

Consider participating in a clinical research study (APPLE Study)

Doctors at Singapore National Eye Centre are assessing whether a new drug being investigated for myopia can slow down the progression of myopia.

By volunteering to participate, you may support efforts to develop a treatment for myopia.

To be in the study, you must be:

- Children aged 6 to 11 years old
- Myopia (short-sightedness) between -1.00 and -6.00D in both eyes
- Normal ocular health except active myopia progression of spherical equivalent \geq -0.50D over the last 12 months in both eyes
